167 packages can be upgraded. Run 'apt list --upgradable' to see them.
https://download.docker.com/linux/ubuntu/noble/InRelease; Key is stored in legacy in legacy trusted.gpg keyring (/etc/apt/trusted.gpg), see the key for more information-key(8)-for details.
khushi@khushi-VirtualBox:~$ sudo apt install docker.io
Reading package lists... Done
Building dependency tree... Done.
Some packages could not be installed. This may mean that you have
requested an impossible situation or if you are required packages
have not yet been created or been moved out, for man apt --key(8)
fails, or been moved out.
The following information may help to resolve the situation:

khushi@khushi-VirtualBox:~$ sudo apt --fix-broken install
khushi@khushi-VirtualBox:~$ sudo systemctl enable docker
khushi@khushi-VirtualBox:~$ sudo systemctl start docker
Warning: The unit file, source configuration file or drop-ins of docker.service changed on disk. Run 'systemctl daemon-reload' to reload units.
khushi@khushi-VirtualBox:~$ sudo systemctl enable docker
khushi@khushi-VirtualBox:~$ sudo systemctl
```

```
root@00d5b619931c:/app
khushi@khushi-VirtualBox:~$ sudo systemctl status docker

Status: Downloaded newer image for hello-world:latest

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
3. The Docker daemon created a new container from that image which runs it:your
executable that produced the output you are currently reading. That it:your
terminal,
4. The Docker daemon streamed that output to the Docker client, which sent it to
your terminal.

To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
https://hub.docker.com/

For more examples and ideas, visit:
https://docs.docker.com/get-started/

khushi@khushi-VirtualBox:~$ sudo usermod -aG docker $USER
khushi@khushi-VirtualBox:~$ newgrp docker
```
